

Terms and conditions for waste acceptance at the AEC

As at 14 September 2026

1. Basis

- 1.1. The basis for the acceptance of waste at the AEC is the current acceptance catalogue (Note A) for the recovery (R1) of waste, as well as the terms and conditions of use.
- 1.2. EEW Delfzijl reserves the right to require a control analysis at the waste producer's expense.
- 1.3. EEW Delfzijl reserves the right to specify delivery quantities, delivery times, limit values, frequency of analysis and permissible concentrations.

2. Delivery

- 2.1. Waste must be delivered in bulk in compactors, skips or containers by vehicles with a rear tipping mechanism or collection vehicles and walking-floor lorries.
- 2.2. Bales may be delivered using a tautliner.
- 2.3. The unloading of bales must be notified in advance.
- 2.4. Where unloading assistance (forklift truck, wheel loader, excavator) is required, a flat-rate unloading charge of currently €250.00 per delivery will be levied.

3. Registration

- 3.1. Registration of delivery quantities for the following week must be made by Thursday of the current week.
- 3.2. Separate delivery dates will be allocated for individual waste types.

The following criteria for waste must be strictly adhered to for every delivery:

4. Dimensions of the waste

- 4.1. Maximum edge lengths of the items: 3D: 50 cm x 50 cm x 50 cm; 2D: 100 cm x 100 cm; 1D: 100 cm.
- 4.2. The waste must burn completely on the grate.
- 4.3. Exceptions apply only in individual cases agreed in advance.

5. Plastic waste

- 5.1. Deliveries of pure plastics are permitted only by prior arrangement.
- 5.2. Deliveries of waste containing chlorine are permitted only by prior arrangement.
- 5.3. Foamed plastics only by prior arrangement.

6. Limit values

- 6.1. Limit value for chlorine: 1.0% by weight of dry matter.
- 6.2. Limit value for fluorine: max. 0.1% by weight of dry matter.
- 6.3. Sulphur limit: max. 0.5% by weight of dry matter.
- 6.4. Further limit values in accordance with the plant licence on a case-by-case basis and based on one kilogram of the mixed bunker content.
- 6.5. The calorific value range should be from 8.5 MJ/kg dry matter to 16.0 MJ/kg dry matter; the target value for the mixture in the bunker is 11.0 MJ/kg.

8. The following waste materials are excluded from acceptance: all waste not listed in the EEW Delfzijl acceptance catalogue, in particular those containing the following components:

- 8.1. Non-combustible waste (plaster, glass wool and mineral wool, asbestos, large quantities of ice and snow).
- 8.2. Solid metal objects (steel cabinets, beams, spring mattresses, gas cartridges).
- 8.3. Solid objects (wood, rubber).
- 8.4. Tied or compressed bales, as well as rolled, multi-layered and bundled materials.

Terms and conditions for waste acceptance at the AEC

As at 14 September 2026

- 8.5. Continuous webs (foil, paper, film rolls).
- 8.6. Round or cylindrical objects (barrels, canisters, tanks, gas cartridges).
- 8.7. Filled big bags only in pre-agreed individual cases
- 8.8. Liquid substances in containers, pasty substances, or substances that melt during combustion (detergents, paints, medicines, bitumen, tar, wax, grease).
- 8.9. Dust-forming waste (toner, ink powder, flour, grinding dust).
- 8.10. Substances that release gases or are reactive (carbide, resins and hardeners).
- 8.11. Contained gases (aerosol cans, gas cartridges containing acetylene, camping gas, helium, nitrous oxide).
- 8.12. Metal foils, dusts or shavings made of light metals (Al, Mg, Be, and alloys).
- 8.13. Flammable liquids as defined by the Occupational Health and Safety Act.
- 8.14. Acids, alkalis and corrosive substances as defined by the Working Environment Act.
- 8.15. Spontaneously combustible substances (cleaning rags containing unsaturated fats, linseed oil).
- 8.16. Explosive substances (fireworks, ammunition, gas cartridges).
- 8.17. Toxic and harmful substances as defined by the Occupational Health and Safety Act (asbestos, synthetic resin components, PAHs).
- 8.18. Radioactive substances (iodine-131 from radionuclide therapy).
- 8.19. Batteries and accumulators; containing lead, lithium or mercury.
- 8.20. Electrical appliances (refrigerators, radiators, screens, light bulbs, small electrical appliances).
- 8.21. Waste for the disposal of which separate legal provisions or other treatment facilities (human and animal excreta, farmyard manure, repulsive substances, animal carcasses, infectious hospital waste, cytostatic drugs).
- 8.22. Single batches of plastic granules.
- 8.23. Glass-fibre or carbon-fibre-reinforced plastics (car body parts, sports equipment, components of wind turbines, bicycle helmets).
- 8.24. Mixtures containing HBCD-containing insulation materials.
- 8.25. Waste with a temperature > 60 °C (compostable biowaste).
- 8.26. Waste with high levels of acid-forming elements such as gypsum, bitumen, end-of-life tyres (S), PVC (Cl) or Teflon (F).
- 8.27. Waste paper, paperboard and cardboard suitable for reuse.

9. Miscellaneous

- 9.1. The EEW Group's General Terms and Conditions and the EEW Delfzijl User Regulations apply.
- 9.2. Separate terms and conditions of acceptance apply to sewage sludge and waste containing plastics intended for sorting.
- 9.3. A separate information sheet applies to radioactivity detection.
