

EEW Energy from Waste GmbH (EEW) is a leading company in the circular economy. At 17 locations in Europe, we recycle more than 5 million tons of waste and sewage sludge every year - and turn it into energy and valuable raw materials. We supply around 700,000 households with electricity. In doing so, we make an active contribution to climate and resource protection. With more than 1,500 employees, we are committed to using waste energy efficiently, reducing the volume of waste, lowering CO₂ emissions and closing material cycles. In addition to the thermal recycling of municipal waste, EEW also operates specialized plants for the mono-incineration of sewage sludge - an important step towards phosphorus recycling. Our sustainability strategy includes CO₂ capture, energy efficiency and the development of future-proof technologies.
